Q He applied saying he was 58 but was 61, and died six years later, after the two-year contestability period. Is the death benefit paid?

A No. At 61 he was too old to qualify (f5), so f4 applies: the policy was never in force, and the premiums are refunded.

f1 · incontestable after 2 years | **f2** · ...except the date of birth | **f3** · still eligible → benefit cut | **f4** · ineligible → never in force | **f5** · applicants aged 18 to 60½

(a) Triple graph

f3 and f4 as binary triples

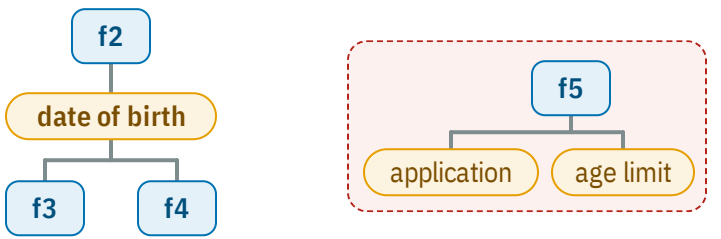

"if not eligible" is lost: f3 and f4 look alike

✕ **Pairs split facts and drop their conditions**

(b) Entity hypergraph

facts linked through shared entities

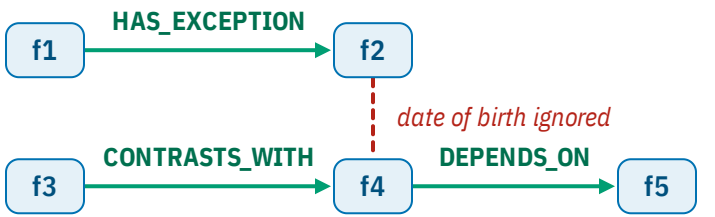

f5 shares no entity with f2–f4: unreachable

✕ **Facts meet only at shared entities**

(c) Discourse graph

facts linked by typed relations only

f2 reaches f4 only through their shared entity

✕ **Ignores shared entities: the path breaks**

(d) Community summaries

one LLM-written summary per cluster

community 1 · f1–f4

Answers are incontestable after two years; misstated ages lead to a premium correction.

?

community 2 · f5

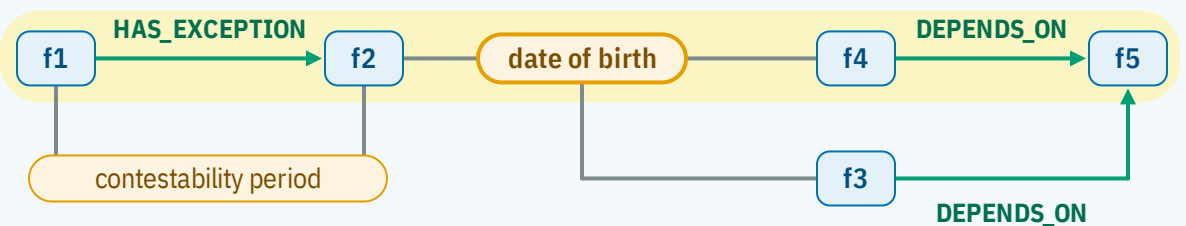

Applicants must be aged 18 to 60½.

✓ **Fuses facts across chunks into new statements**

✕ **Drops f4's condition; whole summaries for one detail**

(e) UNH

facts are hyperedges and discourse nodes in one index

✓ **One path: two typed relations and one shared entity (highlighted)**

The reader gets four facts, two labels, and one entity, each traceable to its clause.
